Loyal  
Clients**

“ There’s an old saying, ‘You get what you pay for.’ That’s true most of the time. With Butler-Justice, you always get more than you pay for! Now that’s a rare thing.”

*Dan Copp, President, Dan Copp Crushing*

“ We choose Butler-Justice for all of our belt scales. They install and calibrate them, and they keep them working properly. When I call for help, they always respond quickly.”

*Bob Lutz, General Superintendent, R. J. Noble*

**Calibration  
Parts, and Service**

- **Why is scale calibration such a mystery to so many people? Simply, lack of training and understanding. We know how scales work, and we know how scales should work in your plant. We’ll show you how. If you get in a bind, we’ll help you solve whatever issues may arise.**
- **If we can’t talk you through your troubleshooting issues on the phone, we’ll rush out to fix the problem at your plant, usually within 24 hours.**

You’ll want to call us for parts, as we stock all the common and even the obscure, infrequently-used parts. No delays. And all of these parts are stocked on our service trucks.

## You Get The Best Combination of Application, Installation & Support

Mike Butler, CEO  
Butler-Justice, Inc.

**“We give you more.”**

Here at Butler-Justice, our goal is to give you more. We love to give our customers greater value, and our knowledge and efforts will pay big dividends for you—

- Our twenty plus years of partnering with Belt-Way Scales, mutually committed to being the leaders, means the best solutions for you.
- Our extensive experience with over 1,000 field installations—backed by years of properly training customers and servicing these systems—gives us a keen edge.
- We possess far more know-how than other companies, and every one of our employees is trained to troubleshoot and calibrate the scales. You call. We listen. We troubleshoot. You go back and get running right. Simple!
- We do everything—sell, install, calibrate and service the systems. You can't find another company that does that locally.

All these reasons mean that a system you buy from us will cost you about **half** of what you'd pay from another supplier. Yes, **HALF!**

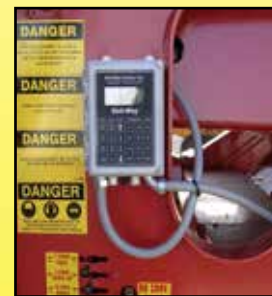

Start right here with us when you want to automate your plant and know timely details about what's going into your stockpiles, as well as how balanced your closed circuits are. We'll show you the way. **Belt-Way!**

## System Features Let You Know Your Real vs. Estimated Production

Automation and scale technology has become a key of part of managing production. Production data and data analysis tools used locally and remotely from any web-enabled device (even your smart phone) have given plant operators real time data to streamline and adjust production as well as take the guesswork out of determining flows, efficiencies and volumes.

**Install.**  
We get it right. We find that some companies have put the scales in the wrong locations. We know where to put them for best performance.

**Connect.**  
The ability to remotely monitor and analyze production occurring throughout your entire plant gives you unprecedented control over production results.

**Operate.**  
Patented self-aligning modular load cell design allows for easy weigh bridge expansion while reducing the need for constant recalibration to achieve high accuracy.

## Belt-Way has Mastered Belt Scale Technology

**We Know How These Systems Work and We Can Prove it in Your Plant.**

No one else sells, installs, calibrates and services belt scales and monitoring equipment like we do. Without these full services, you may have to rely on the manufacturer for support. We've been told that could run a thousand dollars a day or more!

Not with us. We give you the full 4-course “dinner” of sales, installation, calibration and service. This policy has worked for over 20 years and over 1,000 installations. We know that you don't have time to make a bunch of phone calls. Just make one call to us!

**BUTLER - JUSTICE Inc.**

A conveyor belt scale is a powerful tool that (1) measures your materials and (2) controls and monitors plant operations. Belt-Way conveyor belt scales measure operations efficiency and productivity.

Operations are monitored and controlled from the primary crusher all the way through to the finished

stockpiles. Using conveyor belt scales throughout your plant lets you know exactly how much material has been processed and what your current inventory is on all finished products.

Belt Scales give you the ability to accurately track loss and waste throughout your operation.
